

PLYWOOD

Plywood has been one of the most recognized and trusted wood building products for decades. Manufactured from thin sheets of cross-laminated veneer and bonded under heat and pressure with strong adhesives, plywood panels have superior dimensional stability and excellent strength-to-weight ration and are highly resistant to impacts, chemicals and changes in environmental temperature and humidity.

Our plywood production line was established in 2008 and since then have achieved considerable success and recognition.

Our plywood are marketed nationwide in Indonesia, in all of the 34 provinces in Indonesia. This nationwide market coverage is supported by our products long proven industrial quality and our philosophy to be a pioneer in economic product.
