

VENEER TAPE

The Plant of Veneer tape and Putty was established in 1984. With partner from Taiwan, all equipments were imported from Taiwan and the production capacity is 200.000 rolls / month of veneer tape and 21.000 kg / month of Putty.

The domestic market area covers Probolinggo, Gresik, Semarang, Samarinda, Banjarmasin, Ujung Pandang and Medan while export market covers Philippines, India and Brazil. The sales volume per month is around 100.000 rolls / month and up to 15.000 kg / month of putty. Veneer tape is used in the production of plywood. Generally, veneer tape is used to seam wood veneers together.

Construction :

- * Kraft Paper that has high density, with a thickness of 6.5 - 7 micron. It is strong to avoid tearing/snapping while in use.
- * Glue that is used has a high bonding quality to accommodate the different types of wooden veneer. Type : There are two types of Tulus's Veneer Tape, each is custom made to their specific usage.
- * Reeling Tape (Green Veneer Tape) is tape without holes. It is used for tap sides of wooden Veneer's side.
- * Dry Veneer Tape (Gummed Tape) is tape with holes. It is used for tapping cracks in the middle of Wooden Veneer.
