

COCONUT PRODUCT

Coconut tree is known as "Tree of life" is highly valued as source of food and medicine. PT. TULUS AGRO is an integrated coconut processing company, established since 2002. Our product ranges such as frozen coconut meat, coconut water, coconut fiber, cocopeat fertilizer, coconut shell charcoal and coconut milk.

COCONUT WATER

Coconut water has got many medicinal properties. It is a natural isotonic beverage with some level of electrolytic balance as we have in our blood. Coconut water with lot of vitamins, protein, sugar and minerals can serve as nutrition and health drink, energy drink, sports drink as well as urinary antiseptic and eliminates poisons.

FROZEN COCONUT MEAT

Frozen coconut is fresh coconut meat without brown skin then chilled and frozen in cold storage of -18 degrees Celsius. Fresh coconut meat is edible and can be further processed into virgin coconut oil, coconut cream and desiccated coconut.

COCONUT FIBER

Coir fiber is used in floor mats and doormats, automobile dashboard, brushes, sleeping mattresses, and for use in erosion control on river banks and hill-sides as geotextile. Coir Fiber pads are sprayed with rubber latex which bonds the fibers together (rubberized coir) to be used as upholstery padding for the automobile industry in Europe. The material is also used for insulation and packaging.

COCONUT CHARCOAL

Coconut Charcoal is a product obtained from coconut shell. It is produced by burning shells of fully matured coconuts in limited supply of air sufficient only for carbonisation, but not for complete destruction. Coconut charcoal is used widely as domestic and industrial fuel and is also used to produce activated carbon.

COCONUT FERTILIZER

Pupuk Tulus is organic fertilizer consist of cocopeat and other organic ingredients without any mixture of soil and other chemicals. it also contains microorganism that nourish the soil and plant growth . With the characteristic of cocopeat that has water holding capacity, pupuk Tulus require less watering and less frequent fertilizing.

COCONUT MILK

Coconut milk is the liquid that comes from the grated meat of a coconut meat. It should not be confused with coconut water. Coconut milk is used for desserts and rich sauces, cooking curries and soups. Unlike other nuts, coconut provide fat that is mostly in the form of Medium Chain Saturated Fatty Acids, one called lauric acid which acting as an antiviral and antibacterial that destroys a wide variety of disease causing organisms.

COCONUT COPRA

Copra is mailnly used for oil extraction and which is further processed into many different product such as cooking oil, biodiesel and oleochemical. Our white copra is high quality and oil extracted from it can be consumed without going through refined, bleached and deodorized (RBD process).
